This is such a bad idea on all levels. Energy production globally is moving away from fossil fuel extraction in all forms. Those platforms could easily host Hydrostor TM energy storage systems for solar or wind generation and plug directly into the existing grid. There will be enough coastal disruption from proposed desalination plants. This is very backward infrastructure planning. Get your heads in the game. If you must, look to Saudi Arabia. They are getting off of fossil fuels in the next 50 years. I don't want California to have to buy renewables from them too!
